

MD Rifat Mohsin Tapader

Full-Stack Web & Android App Developer

rifatmohsin716@gmail.com 
github.com/Rifat-Profiles 
Portfolio: Hinata098/portfolio 
Sylhet, Bangladesh 

PROFESSIONAL SUMMARY

Results-oriented Full-Stack Web and Android Developer based in Sylhet, Bangladesh, specializing in reactive frontends, clean Android architectures, and high-performance cross-platform software. Proven track record of developing native Kotlin/Compose applications with offline-first persistence (Room DB) as well as modern Web applications (React.js, Tailwind CSS, Three.js 3D WebGL, Node.js). Passionate about performance tuning, coroutine-driven asynchronous orchestration, MVVM/Clean Architecture patterns, and crafting seamless, intuitive user experiences.

CORE TECHNICAL COMPETENCIES

Mobile Engineering

Kotlin Jetpack Compose Android SDK Coroutines & Flow MVVM / Clean Arch
Room DB & SQLite WorkManager Material 3

Web & Frontend

React.js JavaScript (ES6+) TypeScript Tailwind CSS Three.js / WebGL
HTML5 & Modern CSS Vite Responsive Design

Backend & Cloud

Node.js & Express RESTful APIs JWT Auth SQLite / PostgreSQL
Firebase (Auth/Firestore) Axios / Retrofit

Tools & Workflows

Git & GitHub Android Studio VS Code Gradle Build System Postman
UI/UX & Figma Vercel & Cloudflare

FEATURED PROJECTS & ENGINEERING EXPERIENCE

Nexload — High-Speed Android Media Downloader Android APK [github.com/Rifat-Profiles/Nexload...](#)

Tech Stack: Kotlin, Android SDK, Kotlin Coroutines, Background Services, Material 3, MVVM

- Architected a multi-threaded media parsing and downloading engine in Kotlin, enabling concurrent high-definition video and image extraction from major social platforms with zero UI thread blocking.
- Implemented resilient background download orchestration using Android Services and notification progress channels with pause/resume capabilities.
- Crafted an adaptive Material 3 dark-themed user interface focused on high usability, battery efficiency, and zero telemetry overhead.

TaskFlow — Offline-First Productivity & Habit App Android App [github.com/Rifat-Profiles/to-do-app](#)

Tech Stack: Jetpack Compose, Kotlin, Room Database, SQLite DAOs, StateFlow, Coroutines

- Engineered an offline-first task and habit tracking Android application eliminating network latency through local-first persistence.
- Designed a robust relational data model using Room Database and SQLite DAOs with live observables via Kotlin StateFlow.
- Implemented a fully declarative UI with Jetpack Compose featuring smooth state transitions, streak counters, and custom priority tagging.

NovaSphere — Interactive 3D Web & Developer Portal Web & 3D WebGL [github.com/Hinata098/portfolio](#)

Tech Stack: React 18, Three.js, WebGL, Tailwind CSS, Web Audio API, Vite, Cloudflare

- Engineered an interactive 3D WebGL hero experience with procedural icosahedron geometry, dual-orbit lighting, and 850+ dynamic particle fields maintaining steady 60+ FPS performance.
- Built a procedural audio synthesizer utilizing the native browser Web Audio API, delivering instant sound feedback with OKB of downloaded audio assets.
- Constructed an interactive in-browser CLI terminal emulator processing user commands with simulated retro matrix output and dynamic page routing.

PulseREST — Microservice Engine & API Testing Suite Backend Service [github.com/Rifat-Profiles](#)

Tech Stack: Node.js, Express.js, RESTful Architecture, JWT Security, SQLite

- Developed an asynchronous API testing microservice facilitating rapid endpoint verification, mock response generation, and schema validation.

- Secured endpoints using JSON Web Token (JWT) authorization, request rate limiting, input sanitization, and structured centralized error logging.

EDUCATION & BACKGROUND

Computer Science & Software Development

Undergraduate Studies & Technical Training

Sylhet, Bangladesh

Focus: Software Architecture, Data Structures, Mobile & Web Systems

ENGINEERING PHILOSOPHY

- **Performance First:** Optimized coroutines, zero unnecessary re-renders, and battery-conscious background execution.
- **Clean Architecture:** Separation of concerns, testable business logic, and modular MVVM architecture.
- **Fluid UI/UX:** Thoughtful micro-animations, tactile feedback, and accessible cross-platform interfaces.
